

CHEM 130
Quiz 2 – Sept. 9, 2011

Name _____

Complete the following problems. You must show your work to receive full credit. Show your answers to the correct number of significant figures with the correct units.

1. The volume of seawater on earth is about $330,000,000 \text{ mi}^3$. If seawater is 3.5% sodium chloride by mass and has a density of 1.03 g/mL , what is the approximate mass of sodium chloride, in metric tons, dissolved in the seawater on earth? (10 points)
(1 mi = 1.609 km, 1 metric ton = 1000 kg).

2. A graduated cylinder is partially filled with 8.00 grams of diatomaceous earth, a porous material that is often used as a filtering medium. If diatomaceous earth is insoluble in water and has a density of 2.20 g/cm^3 , what volume of water must be added to bring the total volume in the cylinder to 100.0 mL? (8 points):

3. Complete the table below (8 points):

Name	Symbol	# Protons	# Neutrons	# Electrons
chlorine - 37		17		17
	^{31}P			
		25	30	23

Possibly Useful Information

$\% \text{ by mass} = \frac{\text{g component}}{100 \text{ g sample}}$	$d = m/v$
Don't walk between parked cars... ...or moving ones!	$1 \text{ cm}^3 = 1 \text{ mL}$ $1000 \text{ cm}^3 = 1 \text{ L}$
