

Quiz 5 – September 28, 2018

Complete the following problems. Write your final answers in the blanks provided. You must show your work to receive full credit. Show your answers to the correct number of significant figures with the correct units.

1. A side reaction in the manufacture of rayon from wood pulp is shown below. How many grams of Na_2CS_3 are produced from the reaction of 36.6 mL of liquid CS_2 (density = 1.26 g/mL) with 36.6 g NaOH ? (9 pts)

This is a limiting reactant problem!

$$36.6 \text{ mL} \times \frac{1.26 \text{ g CS}_2}{\text{mL}} \times \frac{1 \text{ mol CS}_2}{76.14 \text{ g CS}_2} \times \frac{2 \text{ mol Na}_2\text{CS}_3}{3 \text{ mol CS}_2} \times \frac{154.19 \text{ g Na}_2\text{CS}_3}{1 \text{ mol Na}_2\text{CS}_3} = 62.3 \text{ g Na}_2\text{CS}_3$$

$$36.6 \text{ g NaOH} \times \frac{1 \text{ mol NaOH}}{40.00 \text{ g NaOH}} \times \frac{2 \text{ mol Na}_2\text{CS}_3}{6 \text{ mol NaOH}} \times \frac{154.19 \text{ g Na}_2\text{CS}_3}{1 \text{ mol Na}_2\text{CS}_3} = 47.0 \text{ g Na}_2\text{CS}_3$$

Therefore, NaOH is the limiting reactant and the maximum amount of Na_2CS_3 possible is 47.0 g.

Answer 47.0 Na_2CS_3

2. Assuming an excess of acetic acid (60.05 g/mol), what mass of PCl_3 (137.33 g/mol) must react to produce 125 g of acetyl chloride ($\text{C}_2\text{H}_3\text{OCl}$, 78.50 g/mol), if the reaction has a 69.7% yield? (8 points)

There are multiple approaches to this problem. Here is one:

We need the theoretical yield to do the calculation:

$$\text{Theoretical yield} = \text{actual yield}/0.697 = 125\text{g}/0.697 = 179.3 \text{ g}$$

$$179.3 \text{ g C}_2\text{H}_3\text{OCl} \times \frac{1 \text{ mol C}_2\text{H}_3\text{OCl}}{78.50 \text{ g C}_2\text{H}_3\text{OCl}} \times \frac{1 \text{ mol PCl}_3}{3 \text{ mol C}_2\text{H}_3\text{OCl}} \times \frac{137.33 \text{ g PCl}_3}{1 \text{ mol PCl}_3} = 104.6 \text{ g} = 105 \text{ g C}_2\text{H}_4\text{O}_2$$

Answer 105 g $\text{C}_2\text{H}_4\text{O}_2$

3. Molarity: (8 pts.)

- a. What mass of sodium chloride (58.443 g/mol) is required to prepare 250.0 mL of a 1.75 M NaCl solution? (4 points)

$$0.250 \text{ L} \times \frac{1.75 \text{ mol NaCl}}{1 \text{ L}} \times \frac{58.443 \text{ g NaCl}}{1 \text{ mol NaCl}} = \mathbf{25.6 \text{ g NaCl}}$$

Answer 25.6 g NaCl

- b. What NaCl concentration results when 275 mL of a 0.880 M NaCl solution is mixed with 651 mL of a 0.220 M NaCl solution? (4 points)

The concentration in the resulting solution depends on the total number of moles of NaCl and the total volume of solution.

- The total volume of solution is: $275 \text{ mL} + 651 \text{ mL} = 926 \text{ mL}$ or 0.926 L
 From the 0.880 M solution: $0.275 \text{ L} \times \frac{0.880 \text{ mol NaCl}}{1 \text{ L}} = 0.242 \text{ mol NaCl}$
- From the 0.220 M solution: $0.651 \text{ L} \times \frac{0.220 \text{ mol NaCl}}{1 \text{ L}} = 0.143 \text{ mol NaCl}$
- Total moles of NaCl is: $(0.220 + 0.143) \text{ mol NaCl} = 0.363 \text{ mol NaCl}$

$$\text{The final concentration is : } \frac{0.363 \text{ mol NaCl}}{0.926 \text{ L}} = \mathbf{0.392 \text{ M NaCl}}$$

Answer 0.416 M NaCl
